PROJECT REPORT

Digital Literacy Project Report

Name: Dewansh Kejriwal

Registration Number: 25BAI10417

Branch: B.Tech CSE in AI ML

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Date of Submission: 31st march, 2026

INTRODUCTION

This project focuses on developing essential digital literacy skills required for students in today's technology-driven world. As a Student Digital Ambassador, the objective was to understand and apply concepts such as online presence, digital communication, cybersecurity awareness, and the use of digital tools.

Through this project, I explored various platforms, created professional profiles, designed an infographic, and learned about safe online practices. This project helped me understand the importance of responsible and effective use of digital technologies in academic and professional life.

TASK 1

For this task, I created a digital literacy awareness infographic using **Canva**. The infographic explains what digital literacy means and why it is important for students today. I included sections on digital literacy basics, useful digital tools, safe internet practices, and building a professional online presence. I used simple bullet points, icons, and clear headings so that the information is easy to read and understand at a glance.

The main challenge was deciding how to present information briefly without making the design look crowded. This activity helped me realize that good digital communication is not about adding more content but about presenting key ideas clearly and visually. Overall, the task improved my understanding of responsible technology use and showed me how visual tools can be used to spread awareness effectively.

TASK 2

For this task, I created professional profiles on GitHub, LinkedIn, and HackerRank to begin building my digital presence as an engineering student. GitHub helps me

store and manage academic projects, while LinkedIn allows me to present my educational background and connect with professionals. HackerRank provides a platform to practise coding and improve problem-solving skills.

Setting up these platforms helped me understand how students can gradually build an online portfolio from the first year itself. Earlier, I viewed social platforms mainly for communication, but this activity showed me how they can support academic growth and career development. Over the next four years, I plan to regularly upload projects on GitHub, improve my coding practice on HackerRank, and update LinkedIn with new skills and achievements. Overall, this task introduced me to the importance of maintaining a professional digital identity from the beginning of my college journey.

TASK 3

In this task, I used HackerRank to practice coding and completed a beginner-level problem. This helped me understand basic programming concepts and problem-solving techniques.

I also created a Google Form to design a digital literacy awareness quiz. The form included multiple-choice and short-answer questions related to digital safety and tools. I linked the form to Google Sheets to collect responses.

This task improved my understanding of coding platforms and collaboration tools. These tools will help me academically by enhancing my coding skills and enabling me to create surveys and collect data efficiently.

TASK 4

Poor digital communication can lead to misunderstandings and missed opportunities. For example, sending an email without a clear subject line or proper tone may result in the message being ignored or misunderstood.

In academic and professional environments, this can cause serious issues such as missed deadlines or lack of response. To avoid such problems, it is important to

follow proper email etiquette, including using a clear subject, polite language, and structured content.

This task helped me understand the importance of professional communication.

TASK 5

While researching cybercrime, I was surprised by how common phishing attacks are and how easily people fall victim to them. Many fraudulent messages and websites look very real, making them difficult to identify.

This task helped me understand the importance of being cautious while using the internet. One habit I will change is carefully checking links and verifying sources before sharing any personal information.

Overall, this task increased my awareness about online safety and protecting personal data.

CONCLUSION

This project helped me develop a better understanding of digital literacy and its importance in today's world. I learned how to create a professional online presence, communicate effectively, and stay safe online.

The tasks were practical and helped me gain hands-on experience with various digital tools and platforms. Overall, this project has improved my confidence in using digital technologies responsibly.
